Minimum Approvers (Quorum Size)

Sometimes you don't need all the Approvers in a list or team to approve a document in order for it to be approved altogether.

Use the Minimum Approvers option to set the required amount of Approvals that will trigger the Approval to be accepted.

E.g. in the example below, 1 of the 2 approvers need approve the document before it is considered Approved.

Remember that if anyone rejects the approval, then this cancels out the approvals.
