Perform Maintenance

Sometimes you may need to perform troubleshooting on Approvals for Confluence.

Generally you should only use these functions if you're trying to solve an issue related to a particular issue.

The App is designed to operate without these being used, so please get in touch with the support team if you're having problems.

Functions

- Remove all invalid approval entries
  - Pages that no longer exist will have approvals removed
  - Spaces that no longer exist will have approvals removed
  - All but the latest Approval instance will be marked as superseded
- Reset All Notifications
  - Remove all active In-App Notifications for all Users

As an administrator, open the Settings page and open the 'Maintenance' link:
