

Configure Automatic Restriction

Maybe you would like to automatically hide pages which contain content under a certain sensitivity level - e.g. Highly Restricted.

Compliance for Confluence allows you to automatically change the visibility of the page from a single click - all you need to do is set up each Spaces' options and the users/groups which you would like the permissions to be applied to.

How To

1. Navigate to a Space in which you'd like to set up automated restriction.
2. Click on the 'Space Admin' button in the bottom-left of the sidebar and click 'Apps' or 'Add-ons'.
3. You should be taken to the Compliance Space Configuration page, which allows you to:
 - a. Opt this Space out of using the features.
 - b. Force users to classify pages on creation/update.
 - c. Set which groups (preferred) and users have access to pages of a particular classification level.

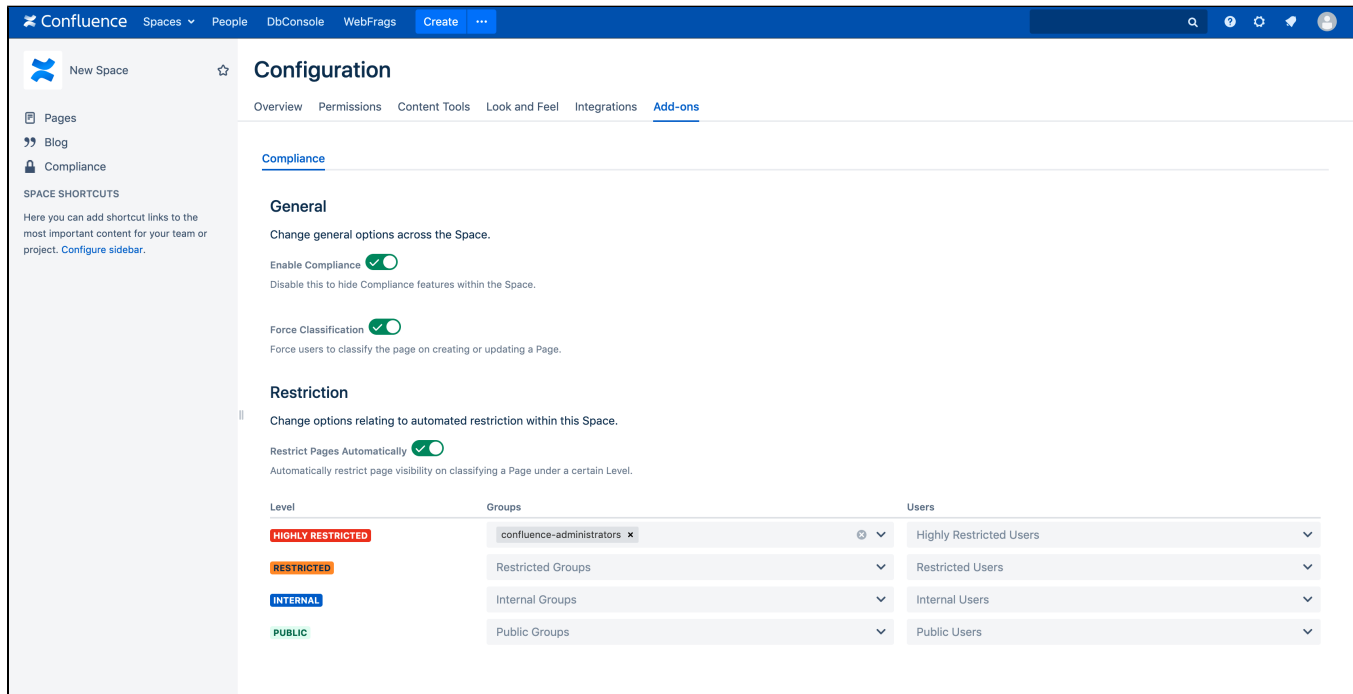

We recommend using groups, as the members can be changed later and will retrospectively change the page permissions.

Recommendation

⚠ We recommend using Groups to restrict pages.

With Groups, you can change the members later and it will retrospectively apply these changes to previously classified + restricted pages.

Using Users will mean that when you change the members who can access different levels, this will not be applied retrospectively.

The screenshot shows the 'Configuration' page for a Confluence space, specifically the 'Add-ons' tab for Compliance. The 'Restriction' section is expanded, showing options for automated restriction. The 'Restrict Pages Automatically' toggle is turned on. Below this, a table maps classification levels to groups and users.

Level	Groups	Users
HIGHLY RESTRICTED	confluence-administrators x	Highly Restricted Users
RESTRICTED	Restricted Groups	Restricted Users
INTERNAL	Internal Groups	Internal Users
PUBLIC	Public Groups	Public Users
